Fix Pack Contents

Installation of this fix pack addresses the following issues, the details of which are outlined below.

- IS-5797
- IS-5899
- IS-5900
- IS-5901
- IS-5902
- IS-5903
- IS-5916
- IS-5922
- IS-5932
- IS-5940
- IS-5960
- IS-5965
- IS-5969
- IS-5971
- IS-5972
- IS-5973
- IS-5989
- IS-5990

- IS-5992
- IS-5996

Description of Issues Fixed and Enhancements

The application of this update addresses the following issues.

IS-5797: Accessing Pivot Grid Dashboard through Govern causing licensing error

During testing it was discovered that accessing a Dashboard containing a pivot grid via a Govern portal would cause a licensing error. In order to fix this issue, the product's pivot grid library has been upgraded to the latest version.

IS-5899: Rest API UI issue: When None is specified for Authentication, username, password and show password are not disabled

During testing it was discovered that if None was specified as the Authentication type in a REST API Analysis node, the password and show password parameters were not disabled. This issue has been fixed.

IS-5900: Rest API UI issue: Authorization is not in the drop down list of HTTP header

During testing it was discovered that within the Analysis REST API node, Authorization was not in the drop down list of the HTTP header parameter. This issue has been fixed.

IS-5901: Rest API issue: Error when trying get data from Govern

During testing it was discovered that when trying to get data from Govern using the REST API node, an error would be returned in the response. This issue has been fixed.

IS-5902: Error deploying to AWS in EU

During testing it was discovered that an error would occur when attempting to deploy the product in the EU region of AWS. This issue has been fixed.

IS-5903: Error running Test in Analysis editor in EU AWS

During testing it was also discovered that the product's Analysis test functionality did not work properly when the product was deployed in the EU region of AWS. This issue has

been fixed.

IS-5916: Centering text in Text Dashlet does not work when saving in MS Edge Browser

During user acceptance testing it was discovered that when attempting to center text in a Text Dashlet and using the Microsoft Edge browser, the centering would not persist. This issue has been fixed.

IS-5922: External Data Store Concurrent Reads Feature Causing StackOverflowError, Recursive Regex in Stack

During user acceptance testing it was discovered that when attempting to use the Concurrent Reads feature on an external Data Store pointing to an SQL Server view, a StackOverflowError would occur. This issue has been fixed.

IS-5932 Rest API Node: Remove validation for URL parameter

During user acceptance testing, validation for the URL parameter was found to be too limiting. As a result, validation for this parameter has been removed.

IS-5940: IDP initiated login not working with Auth0

During testing it was discovered that IDP initiated login was not working with Auth0. This issue has been fixed.

IS-5960: Dashboards renders blank for some users

During testing it was discovered that when some users viewed Dashboards containing left aligned column select filter dashlets, the Dashboard would not render properly. This issue has been fixed.

IS-5965: Unmask/mask icons missing for left aligned column select filter dashlets

During testing it was discovered that the icon files for the unmask all button found in left aligned column select filter dashlets were missing. The icon files have since been added to the product.

IS-5969: Rest API Node: If environment variable is encrypted and is used in Authorization column in the header or URL, an Invalid field validation error occurs.

During testing it was discovered that an invalid field validation error would occur in the REST API Analysis node when using an encrypted environment variable. This issue has been fixed.

IS-5971: Unmask all icon shows next to non-secure fields in Left aligned Drop down Filter Dashlets

During testing, it was discovered that the unmask all icon was incorrectly being displayed for non-secure fields when using a left aligned drop down filter dashlet. This issue has been fixed.

IS-5972 and IS-5973: Floating Point Issues

During user acceptance testing the following issues related to floating point fields were found.

- When a floating point with a value of 0 was exported from a dashlet using the "Data for Excel" feature, the value was being converted to "0E-20".
- Dashboards were not honoring the display format defined for floating point fields, for anything over 4 decimal places.
- Floating Point values were being rounded after three decimal places in Data Stores, even if they truly contained more decimal places.

All of these issues have been fixed.

IS-5989: Exporting Data for Excel with a null value in a month field displays an Unexpected Error and exports incorrect values

During testing, it was discovered that data sets containing month fields with null values would cause an Unexpected Error to be thrown when using the Export Data for Excel feature on a dashlet. Additionally, incorrect values would then be exported to the Excel file. This issue has been fixed.

IS-5990: Show Labels checkbox does not work for Dimensions in Categorized Horizontal charts

During testing it was discovered that unchecking the Show Labels checkbox for a dimension in a Categorized Horizontal chart had no effect, when doing so should have hidden the dimension labels. This issue has been fixed.

IS-5992: Using Distance from Axis label setting causes other label settings to not be applied

During testing it was discovered that when the Distance from Axis parameter was set on an x or y axis label, it would cause any other settings made to the label to not be applied. Expected behavior is that other settings should be retained. This issue has been fixed.

IS-5996: java.lang.ArithmeticException: / by zero @ ExecutionSizeEstimate.estimateSystemSize

When a specific Analysis was executing, it would fail with "java.lang.ArithmeticException: / by zero" just a few seconds after starting This issue has been fixed.
