Fix Pack Overview

This document is intended for Infogix Data3Sixty 2.1.2 customers who are receiving the 2.1.2-Update-4. The document describes the fixes included in the update.

On the cloud version of Infogix Data3Sixty, this update will bring customers to Build 201807301947. On the enterprise version of Infogix Data3Sixty, the 2.1.2-Update-4 should be applied to Base Build 201804271007, `sagacity_IS-2.1.2-201804271007-1-fixpack`, `sagacity_IS-2.1.2-201804271007-2-fixpack`, and `sagacity_IS-2.1.2-201804271007-3-fixpack`.

Contacting Customer Support

If you need assistance installing the fix pack or have questions about what it includes, contact Infogix® Customer Support.

2

Description of Issues Fixed and Enhancements

The application of this update addresses the following issues.

IS-4337: Unrecognized field \"instanceCount\" error show upon accept

During testing, it was discovered that changes Analysis settings could lead to an error about an unrecognized field \"instanceCount\". This issue has been fixed.

IS-4436: Export not working in Data Quality Issue Tracking Dashboard

During user acceptance testing, it was discovered that an export of dashlet data could not be performed when using the product within an iframe (such as when it is used in portal mode within Govern) in the Internet Explorer 11 browser. This issue has been fixed.

IS-4469: Unable to Change Instance Count under settings for Dedicated Cluster type

During user acceptance testing, it was discovered that the user was unable to change the instance count for the dedicated cluster type when attempting to override execution sizing in Analysis settings. This issue has been fixed.

IS-4470: Upgrade AWS SDK used by cloud deployment scripts

This enhancement updated the AWS SDK to version 1.11.330. This was done to support the product's newly added UK region.

IS-4472: Executor Count for override execution sizing is not getting saved in Analysis

During testing, it was discovered that the user was unable to save changes to the executor count when attempting to override execution sizing in Analysis settings in the product's Enterprise mode. This issue has been fixed.

IS-4487: Lease Expiration Issue Still Occurring

As part of a prior issue (IS-3855), lease expiration had been increased. During testing, it was found that this increase resolved the issue in most cases, however some cases of lease expiration were still found. With this fix, further changes were made to prevent lease expiration from occurring.

IS-4490: Process Model Failed in PROD: Execute Stage Task - "Access is denied"

This fix addresses the failure of a Process Model in a customer production environment, where the suspected cause was a known multi-threading issue in the kyro serialization library.

IS-4497: Inconsistency in setting the status of child objects when the process model is terminated

During testing, it was discovered that the product did not consistently set the terminal status of child objects when a parent Process Model was terminated. This issue has been fixed.

IS-4504: Unable to execute analysis in dedicated cluster in eu-west-2 AWS region

During testing, it was found that Analysis execution was not occurring on dedicated clusters within the eu-west-2 AWS region. This issue has been fixed.

IS-4505: Shared cluster execution failing in eu-west-2

During testing, it was found that executions were not occurring on shared clusters within the eu-west-2 AWS region. This issue has been fixed.

3

Fix Pack Installation: Enterprise Only

Installation Steps

To install this Fix Pack on the Enterprise Edition* of Infogix Data3Sixty, perform the following steps.

1. Download the Fix Pack into the */tmp* folder
2. Give execute permission to the downloaded Fix Pack, for example:

```
chmod 777 sagacity_FP_201803131310.sh
```
3. Extract the downloaded Fix Pack, simply by running its name as a command. For example:

```
./sagacity_FP_201803131310.sh
```

Extracting a Fix Pack for the first time will create a directory at *opt/infogix/sagacity/maintenance*.

4. Execute the `apply-patch` command from within *opt/infogix/sagacity/maintenance/<patchName>/bin*

To verify the Fix Pack has been applied, use *Help->About* in the Infogix Data3Sixty UI. The product's *Updates* information should be updated.

*Note: Fix packs are pushed to the Cloud Version of Infogix Data3Sixty automatically, so these steps should be ignored.
